1. Use-Case Name

UC13: Set Study Commitment Hours

1.1 Brief Description

This use case allows the Learner to input or modify their committed daily/weekly English study time (e.g., 30 mins/day, 1.5 hours/day). The system uses this setting to dynamically calculate daily task targets on the dashboard widget (F2.5).

STUDIFY

Study Commitment

How much time can you commit to learning English each day? This helps us personalize your daily study plan.

Casual
15 mins/day

Steady
30 mins/day

Intensive
1 hour/day

Or enter custom minutes per day:

mins

Skip for now

Save Schedule Preference →

Figure 13.1: "Study Commitment" screen showing Casual / Steady / Intensive presets and a custom minutes-per-day input field.

2. Flow of Events

2.1 Basic Flow

1. The Learner opens the Settings or Study Preference modal from the Dashboard.
2. The system displays options to select target study duration per day or week.
3. The Learner selects or inputs their desired commitment hours (e.g., 1 hour per day).
4. The Learner clicks "Save Schedule Preference".
5. The system validates and saves the commitment settings to the Learner's profile.
6. The system notifies the widget engine to recalculate daily task quotas.
7. The use case ends.

2.2 Alternative Flows

2.2.1 Invalid Input Values

If the Learner inputs 0 or an unrealistically high number (e.g., > 16 hours/day):

1. The system displays a validation warning: "Please enter a realistic study commitment between 15 minutes and 8 hours daily."
2. The Learner updates the input value and retries saving.

3. Special Requirements

3.1 Input Usability

The UI should provide intuitive presets (e.g., "Casual: 15m/day", "Regular: 30m/day", "Intensive: 1h+/day") alongside custom numeric inputs.

4. Preconditions

4.1 Profile Active

The Learner must be logged into the system.

5. Postconditions

5.1 Settings Saved

The user's daily time budget is stored in the database, triggering dynamic task scheduling for UC14/UC15.

6. Extension Points

6.1 None

No extension points for this use case.
