1. Use-Case Name

UC12: Take Level Assessment Test

1.1 Brief Description

This use case enables a Learner to take a comprehensive assessment test for a specific CEFR level (e.g., A1, A2). Scoring $\geq 90\%$ on this test allows the Learner to skip directly to the next CEFR level without completing all individual lessons. It utilizes Multiple Choice (UC6) and Fill in the Blank (UC7) question formats.

The screenshot displays the STUDIFY assessment interface. At the top, the logo 'STUDIFY' is on the left, and 'Question 7 of 20' and '35%' are in the center. On the right, there is a link 'Exit Assessment'. Below the header, a blue button reads 'CEFR Level A1 Formal Assessment'. The main heading is 'Reading Comprehension & Grammar', followed by the instruction 'Select the best response to complete the dialogue.' The question is presented in a white box with a blue user icon: '"Excuse me, what time ____ the next train to London arrive?"'. Below the question are four radio button options: 'is', 'does', 'do', and 'are'.

Figure 12.1: CEFR Level A1 Formal Assessment — "Reading Comprehension & Grammar" question 7 of 20, with countdown progress bar.

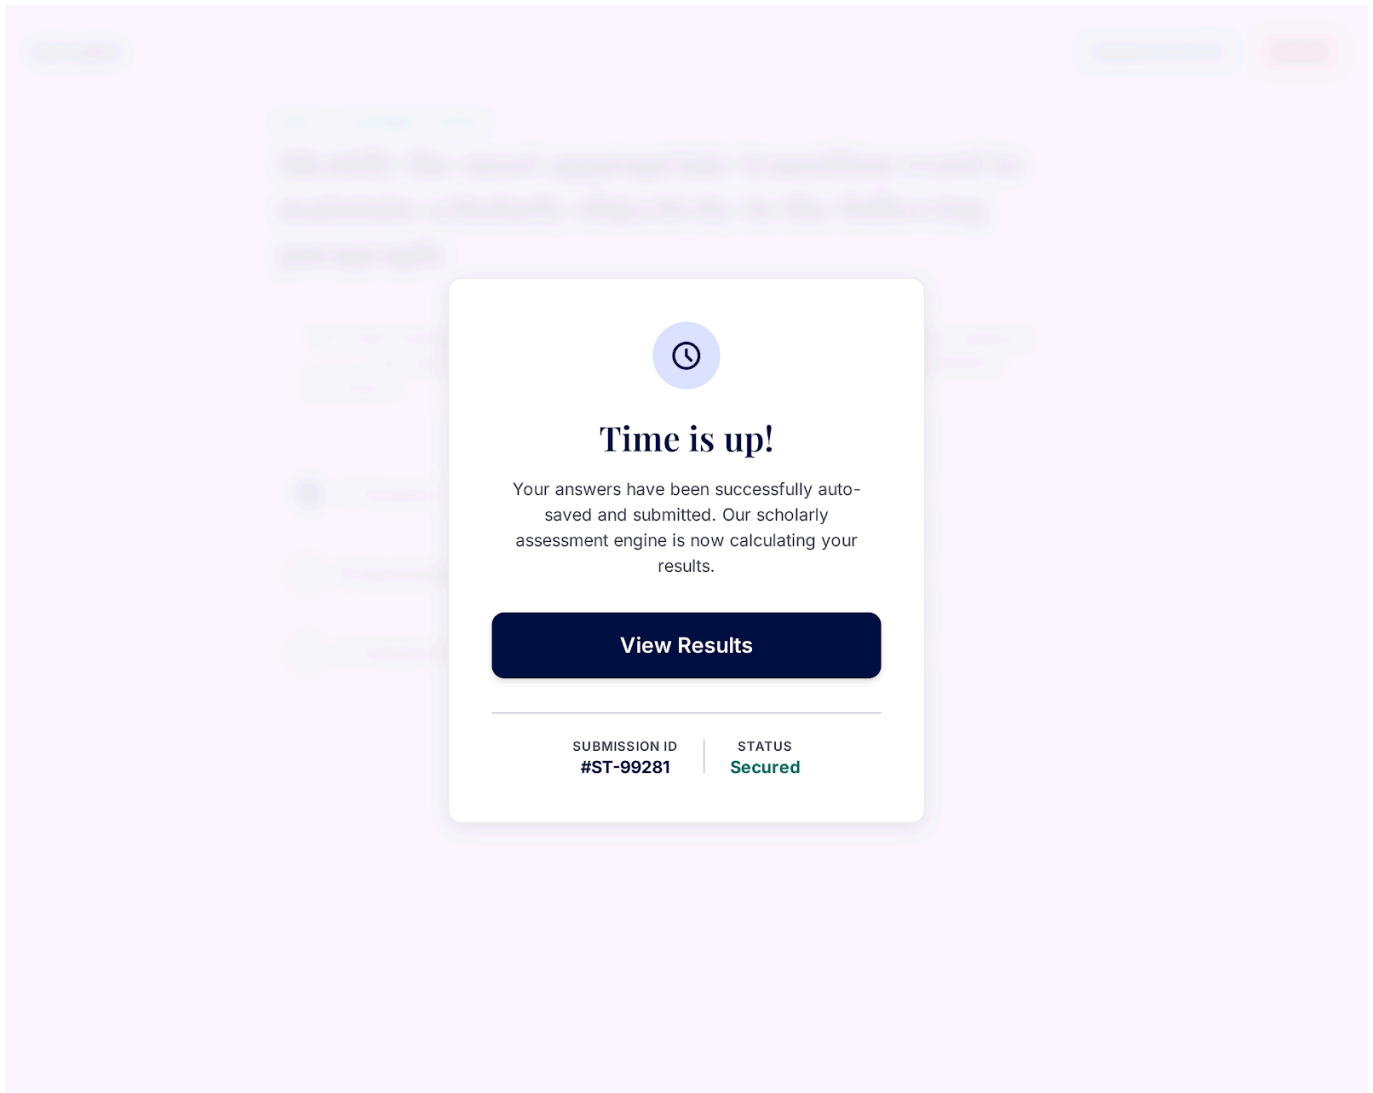

2. Flow of Events

2.1 Basic Flow

1. The Learner selects "Take Level Assessment Test" from the Roadmap overview (UC1).
2. The system retrieves a randomized test pool containing both Multiple Choice (UC6) and Fill in the Blank (UC7) questions for the active level.
3. The system initiates a countdown timer and renders the test interface.
4. The Learner completes the questions.
5. The Learner clicks "Submit Assessment".
6. The system executes **UC8: View Quiz/Assessment Result** (<> relationship).

2.2 Alternative Flows

2.2.1 Test Timer Expiration

If the allocated time for the assessment expires before the Learner clicks "Submit Assessment":

1. The system automatically locks the test interface.
2. The system force-submits all currently answered questions.
3. The flow proceeds to step 6 of the Basic Flow (UC8).

3. Special Requirements

3.1 Timer and Anti-Cheating Controls

The test session must enforce a strict server-side timer (e.g., 30 minutes) to prevent local client clock manipulation.

4. Preconditions

4.1 Level Selected

The Learner must have selected an active or accessible CEFR level from the Roadmap (UC1).

5. Postconditions

5.1 Submission Initiated

The assessment attempt is logged, and results are handed over to UC8 for evaluation against the 90% threshold rule.

6. Extension Points

6.1 None

No extension points for this use case.
